

CleanEquity® Monaco 2016 – Lord Drayson of Drayson Technologies to give Address at CleanEquity Monaco 2016

[CleanEquity Monaco](#), 3rd & 4th March, is the preeminent global forum for 30 best in class emerging cleantech and resource efficiency to meet specialist financial investors, corporate venturers, partners & acquirers, policy makers, end users and media.

Innovator Capital is pleased to announce that Lord Paul Drayson of Drayson Technologies will give the opening address on Friday morning.

Drayson Technologies is focused on providing “world-first” solutions for health and the environment. Led by former UK Science Minister and world electric land speed record holder, Lord Drayson, it has pioneered environmentally sustainable technologies since 2007, working across fields such as green motor-sport, high performance electric drivetrains and wireless charging.

Freevolt is the Company’s latest technology breakthrough. It recycles radio frequency energy in existing wireless network transmissions, such as wi-fi and cellular networks, to power connected devices and to realise the full potential of the internet of things by freeing them from the constraints of batteries and wired power supplies.

The CleanSpace Tag is Drayson Technology’s first application of Freevolt and its first consumer product. It is the world’s first personal air pollution smart sensor powered entirely from recycled RF energy. As people use CleanSpace Tag sensors to see the air they breathe via data synced to their smartphone, they create a global network of crowd-sourced information of great value to governments, businesses and other organisations looking to understand and reduce global air pollution. Launched in the UK last year, CleanSpace is being rolled out across international markets in 2016.

Lord (Paul) Drayson, Founder & CEO of Drayson Technologies said: *“We are delighted to be at the CleanEquity conference again this year, as we seek new international partners and investors that share our vision for creating technologies like Freevolt and CleanSpace that put the world first”.*

Presenting Companies

Name	Country
